**DETAILED ACTION**  
***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-95, 137-148, 153, drawn to an integrated circuit, classified in class 257, subclass 211.
- II. Claims 96-136, 151, 152 and 155, drawn to a method for reducing parasitic capacitance in an integrated circuit, classified in class 327, subclass 382.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the claimed process may also be implemented with flexible conductive layers, as well as the claimed plane-like metal layers.
